## Introduction & Instructions for Use

### Introduction

Supplemental Clinical Criteria are a set of objective and evidence-based behavioral health criteria used by medical necessity plans to standardize coverage determinations, promote evidence-based practices, and support members’ recovery, resiliency, and wellbeing for behavioral health benefit plans that are managed by Optum®.

### Instructions for Use

This guideline is used to make coverage determinations as well as to inform discussions about evidence-based practices and discharge planning for behavioral health benefit plans managed by Optum. When deciding coverage, the member’s specific benefits must be referenced.

All reviewers must first identify member eligibility, the member’s specific benefit plan coverage, and any federal or state regulatory requirements that supersede the member’s benefits prior to using this guideline. In the event that the requested service or procedure is limited or excluded from the benefit, is defined differently or there is otherwise a conflict between this guideline and the member’s specific benefit, the member’s specific benefit supersedes this guideline. Other clinical criteria may apply. Optum reserves the right, in its sole discretion, to modify its clinical criteria as necessary using the process described in Clinical Criteria. This guideline is provided for informational purposes. It does not constitute medical advice.

Optum may also use tools developed by third parties that are intended to be used in connection with the independent professional medical judgment of a qualified health care provider and do not constitute the practice of medicine or medical advice. Optum may develop clinical criteria or adopt externally-developed clinical criteria that supersede this guideline when required to do so by contract or regulation.
Benefit Considerations

Before using this policy, please check the member-specific benefit plan document and any federal or state mandates, if applicable.

Prior Authorization and Pre-Service Notification

- Outpatient electroconvulsive therapy (ECT) and inpatient admissions require prior authorization or preservice notification, depending on the memberspecific benefit plan. Notification of scheduled treatment must occur at least five (5) business days before admission. Notification of unscheduled treatment (including Emergency admissions) should occur as soon as is reasonably possible. In the event that Optum is not notified of outpatient ECT or an inpatient admission, benefits may be reduced. Check the member’s specific benefit plan document for the applicable penalty and allowance of a grace period before applying a penalty for failure to notify Optum as required.

Description of Service

Electroconvulsive therapy (ECT) is a treatment device used for treating severe psychiatric illness by applying a brief intense electrical current to precise locations on the head to induce a seizure that lasts less than one minute. ECT is delivered in inpatient or outpatient settings and administered by a skilled psychiatrist privileged to perform ECT along with an anesthesiologist, and a nurse or physician assistant. ECT has been extensively studied with the longest history of use (Quevedo et al., 2022; American Psychiatric Association [APA], 2019).

Coverage Rationale

- ECT is medically necessary to treat severe, treatment-resistant depression, and may also be useful in treating individuals with bipolar disorder and schizophrenia that have not responded to other treatments (APA, 2022; Quevedo et al., 2022; VA/DoD, 2022).
- ECT is not medically necessary for any of the following:
  - Multiple seizure electroconvulsive therapy (MECT). The efficacy of ECT for these indications has not been verified by in well-designed controlled trials. In addition, studies have demonstrated an increased risk of adverse effects with multiple seizures (CMS NCD, 2003).
  - Other diagnoses in the absence of major depressive disorder, bipolar disorder, or schizophrenia disorder, including, but not limited to any of the following:
    - Substance use disorders (VA/DoD, 2021);
    - Autism spectrum disorders (National Autism Center, 2022; National Autism Association, 2023);
    - Obsessive-compulsive disorder (APA, 2007; Anxiety & Depression Association of America, 2015);
- The requested service or procedure must be reviewed against the language in the member's benefit document. When the requested service or procedure is limited or excluded from the member’s benefit document, or is otherwise defined differently, it is the terms of the member's benefit document that prevails.
- Per the specific requirements of the plan, health care services or supplies may not be covered when inconsistent with evidence-based clinical guidelines.
